 Attorney for Applicant,
 Medical Corporation H&S

FILED

JUL 13 2020

SUSAN Y. SOONG
 CLERK, U.S. DISTRICT COURT
 NORTHERN DISTRICT OF CALIFORNIA
 SAN JOSE

**UNITED STATES DISTRICT COURT
 NORTHERN DISTRICT OF CALIFORNIA**

In re Ex Parte Application of

MEDICAL CORPORATION H&S,,

Applicants.

Case No.

CV-20 80117**VKD**

**DECLARATION OF KEN DOYAMA IN
 SUPPORT OF EX PARTE APPLICATION
 FOR ORDER PURSUANT TO 28 U.S.C. §
 1782 PERMITTING DISCOVERY FOR
 USE IN FOREIGN PROCEEDING**

BY FAX

I, Ken Doyama, declare as follows:

1. I am an attorney duly licensed to practice law in Japan and the State of California.
2. I have personal knowledge of each matter stated herein.
3. I submit this declaration in support of Medical Corporation H&S (the "Applicant")'s ex parte application for order pursuant to 28 U.S.C. § 1782 (the "Application").
4. I have reviewed the Application and other supporting documents concurrently submitted herewith and am familiar with the matters stated in those documents. The purpose of this declaration is to explain the need for disclosure of all access logs held by a Content Provider (defined below) in order for the Applicant to identify an anonymous perpetrator who posted illegal statements (e.g. defamation and unlawful business interference) on the internet, in case the Court may wonder if the duration for access logs should be limited.

1 5. Explanation of Terms

2 An Internet Service Provider (the “ISP”) is an entity such as AT&T which provides
3 internet services for users. A Content Provider (the “CP”) is an entity which provides
4 content on the internet. If a user accesses a Google map review page by using AT&T
5 line, the ISP is AT&T and the CP is Google LLC (“Google”).

6 In the case of above example, at first, the communication between the user and
7 AT&T is performed before the communication between AT&T and Google is
8 performed. In each communication, information such as IP addresses, time stamps (the
9 time when they were used for the communication) and access types are generally
10 recorded. This record is called an “access log”. See Exhibit A and B.

11 The ISP assigns (lends) an IP address to its user when providing the user with
12 internet access services. The IP address assigned (loaned) to the user is changed at set
13 intervals. Thus, the ISP can identify the user by IP address and time stamp (in other
14 words, the access log).

15 6. How to Identify the Perpetrator by Using the Access Log

16 The victim can identify the perpetrator by using the access log as follows:

- 17 (1) The victim of illegal activity on the internet does not know the ISP the perpetrator
18 used. Thus, the victim needs the CP to disclose the access log in their possession.
19 The Applicant submits the Application for that purpose. See Exhibit A (1).
- 20 (2) Next, the victim identifies the ISP the perpetrator used by the IP addresses
21 disclosed by the CP. Since IP addresses owned by a particular ISP are publicly
22 available, such IP addresses help the victim identify the ISP used by the
23 perpetrator. See Exhibit A (2).
- 24 (3) Next, the victim submits the access logs (including IP addresses and time stamps)
25 disclosed from the CP to the ISP, and requests the perpetrator’s information such
26 as his/her name and address. See Exhibit A (3).
- 27 (4) In this way, the victim is able to obtain the perpetrator’s information from the ISP.
28 See Exhibit A (4).

1 (5) Finally, the victim is able to sue the perpetrator. See Exhibit A (5).

2 Strictly speaking, there is a gap between time stamps recorded by the ISP and
3 those recorded by the CP because of the time needed for communication between the
4 ISP and the CP. However, this gap is negligibly small and should therefore not present
5 any issue.

6 7. The Necessity of Disclosure of the Access Log by the CP

7 In almost all cases, the CP does not have accurate information necessary to identify the
8 perpetrator. First of all, the CP does not obtain the perpetrator's name or address unless
9 the perpetrator volunteers them for using services by the CP. In addition, there is a high
10 possibility the information the CP may receive from the perpetrator at the time of
11 his/her registration for use of the CP's services is fictitious, especially in case of illegal
12 purposes such as posting illegal statements. Thus, in almost all cases, the victim has to
13 rely on the method described in paragraph 6 above to identify the perpetrator. In other
14 words, in almost all cases, having the CP disclose an access log is the only way to
15 identify the perpetrator. That is why the access log from the CP is critically necessary.

16 8. All Access Logs Without Duration Limit Need Be Disclosed

17 Ideally, a single, complete access log should be readily available to enable the victim of
18 defamation on the internet to identify the perpetrator. However, the access log at the
19 time of posting is not always complete, nor does it remain available indefinitely, as
20 explained below. (See Exhibit B). At the same time, it is impossible for the CP to
21 identify a single access log from which all the information needed by the victim can be
22 extracted because of the existence of special tools for anonymization (explained below).

23 As to completeness of a particular log, it is unclear how the provider maintains
24 access logs. For example, some providers such as Google often records only time
25 stamps (not IP addresses) at the time of each posting. In that case, the victim is unable
26 to identify the ISP, which means that the victim is unable to identify the perpetrator,
27 either.

1 As to how long a particular log remains available, the "freshness" of the log is
2 important. If the perpetrator posted an illegal statement (e.g. defamatory comment)
3 several months ago, the CP or the ISP may have already deleted the access log at the
4 time of posting. Generally, the retention period of access logs by providers is only 3 to
5 6 months. Thus, in a large number of cases, the access log at the time of posting has
6 already been deleted by the time a subpoena can be served on the CP or the ISP. In
7 addition, even if the access log at the time of posting remains available and disclosed by
8 the CP, there is a possibility that the ISP has already deleted the access log when the
9 victim asks the ISP to disclose it.

10 It should be noted that the perpetrator can prevent the victim from identifying
11 him/her through access logs by using special tools for anonymization such as Tor (The
12 Onion Router) or Proxy (collectively, the "Special Tools"), mainly used in the dark
13 web. The perpetrator sometimes uses the Special Tools and at other times does not.
14 The victim can possibly identify the perpetrator from the access logs only if the
15 perpetrator does not use the Special Tools. The victim (and the CP), however, cannot
16 specify access logs from which the information sought may be ascertained because the
17 victim does not know when and whether the perpetrator used the Special Tools.

18 Therefore, all access logs, including the most recent logs, need be disclosed as
19 long as they are presumed to be those of the same perpetrator. For example, access logs
20 identifying the same Google account of the perpetrator are presumed to belong to the
21 perpetrator.

22 I declare under penalty of perjury under the laws of the United States that the foregoing
23 is true and correct.
